

The Reclaimer Rig

Wastewater Processing Solutions for Temporary Housing, Construction Sites, and Remote Work Locations

WaterFleet proudly offers The Reclaimer Rig, a self-contained unit that eliminates hazardous transport of sewage and creates a minimal haul-out environment, reduces odors and risks from on-site septic water storage, and provides reclaimed wastewater for approved beneficial reuse. Each high-capacity mobile Reclaimer Rig processes up to 3,000 gallons of domestic wastewater per day.

The Reclaimer Rig

WaterFleet has revolutionized potable water and wastewater management through pioneering technology, and its innovative worker relief facilities are transforming conditions on remote work sites. WaterFleet's green solutions increase workforce productivity, enhance compliance, provide long-range cost savings, streamline operations, and safeguard the environment. The problem-solving focus of its on-site potable water production, wastewater management and modernized worker relief facilities has significant applications for a variety of industries.

System Features and Benefits

Solutions

- Reclaims up to 3,000 GPD from process
- Eliminates haul-out or on-site storage of sewage
- Reduces or eliminates odors from septic water storage

Self-Contained

- Custom, high-capacity 20 ft. enclosed trailer
- Single point electrical connection
- Remote, 24/7 monitoring with fully automated controls

Collection and Transfer

- Includes lift stations for sewage collection
- Includes all connections and single pressurized line delivery
- Secured connection points
- Continuously monitored levels

Reclaim Water

- WaterFleet provides piping to customer-provided storage location
- Customer can reuse water for downhole activities, irrigation or dust suppression
- Discharged water meets regulatory standards for beneficial recycling and is chlorinated and filtered

Utility Requirements

Electric Power

- 220V, 1PH, 60HZ, 60A
- Single point plug connection
