## Protect Your Critical Facility from Water Disruptions with WaterFleet's Water Quality Management Plan

A robust and well managed water quality plan for your critical facility is crucial to maintaining the safety of your water system. WaterFleet proudly offers the most comprehensive water quality management program available.

### The Assure Water program offers:

- On-Site Managed Potable Water Standby Supply
- Automated Water Supply Changeover System
- Water Supply Quality Monitoring
- Accredited Water Management Planning and Oversight
- Mobile Potable Water Supply Production
- Cooling Tower Disinfection Management

## ABOUT WATERFLEET

WaterFleet is a best-in-class service provider of mobile water and wastewater utility services, and workforce relief solutions. Using our state-of-the-art proprietary technology and trained technical staff, we solve human water needs in places where water and wastewater utilities are not available.

## **On-Site Potable Water Standby Supply**

24-48 hours of emergency use water supply stored in an above ground potable water rated tank with its own water quality monitoring and maintenance system to ensure instant availability when the normal water supply is compromised.

## **Water Supply Changeover System**

Piping skid plumbed into your water system that allows for immediate, automated changeover from your normal supply to the backup supply, and a return to normal service following confirmation of water quality restored.

## **Water Supply Quality Monitoring**

Know if the water supplied to your facility is compromised long before the water purveyor notifies you, using the AssureWater Quality monitoring package. This package provides continuous monitoring, trend reporting, and alarming for the critical indicators of water quality. These include water pressure, chlorine disinfection levels, turbidity monitoring, and conductivity tracking.

## **Accredited Water Management Planning and Oversight**

ASHRAE 188 Water Management Plan developed for your facility by accredited Water Quality personnel. Ongoing oversight and testing related to the Water Management Plan, including facility end point quality monitoring. Scheduled and supervised water system disinfection treatments.

## **Mobile Potable Water Supply Production**

WaterFleet's mobile water treatment system, The Water Rig, is brought to your facility to convert the compromised supply to verified potable water to continuously refill your standby supply tank, providing you the capability to operate well beyond the 24-48 hour stored supply.

## **Cooling Tower Disinfection Management**

WaterFleet's proprietary monitoring and disinfection management system for your cooling tower(s) ensures adequate chlorine levels to control biological growth without damaging the system components.

**24/7 WATER QUALITY ASSURANCE**
